# Dissemination and Quality Control Meeting

Barcelona, 19-20 March, 2019

**Dear authorities of Universities, partners of the GRADUA project!**

**Dear Colleagues, Ladies and Gentlemen!**

Above all I would like to transmit to all of you the greetings of the Rector of University of Arts Tirana, Prof. Kastriot Caushi, who unfortunately couldn't attend this important event in your inspiring city and worldwide - known University.

What is more, we are delighted and thank you very much for organizing the Dissemination and Quality Control Meeting, being invited to participate and discuss about the State of Art of GRADUA project, and quality control modalities in our institutions, so, in our case, University of Arts of Tirana.

I would like to again underline the helpful role of the Coordinator of GRADUA Project, accompanying us in all the steps of the project implementation, finding common decisions and better and stable solutions. (I mean all the documentation produced so far: from the ITR documents, Equipment technical specification, Staff cost documents, Survey etc.).

The tasks related to the dissemination events, among others of WP7, such as,

- Hyperlink GRADUA project website on UART webpage; making visible the development of project website and various phases of its implementation
- Project brochure ,  
Are already completed,

In other terms, as a quality control element, we may say that it is an achieved result.

Other tasks have been planned according to the calendar of events and, on the other side; there are still activities that have to be organized, where University of Arts is going to be as collaborative as possible.

---

What is actually the position of the University of Arts toward those tasks?

Our website has hyperlinked the Gradua project website (<https://uart.edu.al/index.php?pg=faqe&id=785&niveli=1289>) and is made known to our students and visitors through direct dissemination actions.

Another task linked with the project brochure, is already offered as a contribution to the project partners in order to be used within dissemination events. (<http://www.graduaproject.com/wp-content/uploads/2018/11/brochure-.pdf>)

More activities to come and the University of Arts will face them with the same methodology and professionalism. Meantime GRADUA project is continuously implemented in a choral style and with a careful supervision of the Coordinator, Agricultural University of Tirana and the precious assistance of Alma Laurea. Those elements create to us the needed guarantee in order to proceed according to the project main lines of development and implementation.

Related to the quality control and its modalities, University of Arts Tirana is fully committed to perform as much as possible the tasks within different working packages of the project itself.

Actually, the internal procedures for the equipment dedicated to our University are finished and everything from this perspective is ready to start working with the platform.

Related to financial reporting, we are a bit late, due to our internal procedures, but by the end of the March we are in the condition to send to the Coordinator all the rest of documents required covering the activities and expenses so far.

Wishing a successful continuation of the working days here in Barcelona, University of Arts thanks you all for your attention.

---
